

The Pain-Free Community Health Assessment

Traditional Community Health Assessments (CHAs) can take 9–12 months using manual processes. Metopio automates data collection, benchmarking, and reporting — delivering ready-to-use insights instantly.

Our platform is purpose-built for non-data experts, empowering any team member — from epidemiologists to program managers — to uncover actionable insights without advanced analytics skills.

Cut Months off Your CHA Process

- Automate data collection, benchmarking, and reporting
- Access preloaded datasets: demographics, health, SDoH, behavioral risks
- Complete CHAs in weeks, not months — and free up staff for action

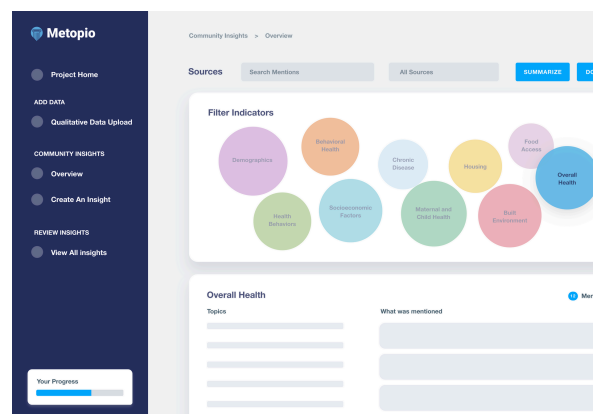

Turning Data Into Actionable Priorities

- Automatically identify high-need populations using AI-powered analysis
- Surface the top social and health issues driving disparities
- Access ready-to-use visualizations and reports to inform decision-making

Driving Results With Impactful Reporting

- Rapidly produce CHA reports ready for board review, PHAB accreditation, or community sharing
- Turn complex data into simple, compelling dashboards
- Enable teams to track progress, measure improvements, and demonstrate real community impact

Trusted by 450+

Hospitals, Health Departments, and Community Organizations Nationwide

AI Enhancements: Analyze data, identify key themes, and auto-generate draft content.

Preloaded Data: Continuously updated federal, state, and local datasets

Seamless Collaboration: Integrate and share qualitative + quantitative insights across teams.

“Metopio made our Community Health Assessment process faster and more efficient. What used to take months, we were able to complete in weeks — with better insights and stronger stakeholder engagement.” *Public Health Department Leader*
